

SMARTLIGHT ANALYTICS

REDUCING EMPLOYER HEALTHCARE COSTS

WHO WE ARE

SmartLight Analytics was formed by a group of statisticians, board-certified physicians and healthcare industry insiders driven to make a meaningful impact on the rising cost of employee healthcare.

SmartLight uses statistical, clinical, and data expertise to deliver the most complete wasteful spend reduction solution directly to self-funded employers.

WHAT WE DO

SmartLight utilizes proprietary inferential analytics customized to your employee population, followed by expert clinical review on 100% of your medical and pharmacy claims.

Our team partners with your plan administrator to implement solutions resulting in a lower per employee healthcare expenditure. We let your data tell us where to look without any preconceived notions about what the errors are beforehand.

Our approach is low-touch and involves zero employee involvement. SmartLight consistently delivers a higher ROI compared to other cost reduction solutions on the market.

HOW WE CAN HELP

Our team helps prevent wasteful spend from ever going out the door in the first place.

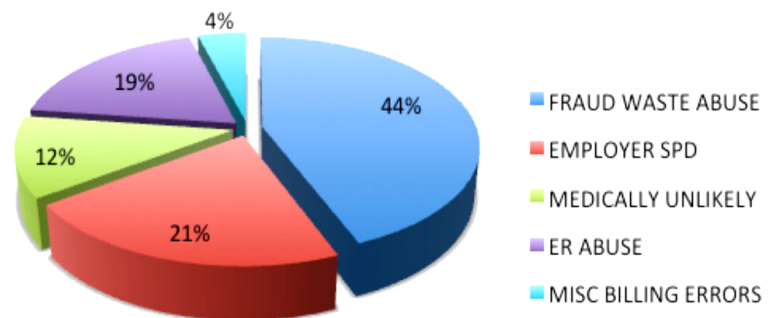

The SmartLight solution results in cost savings

"SmartLight Analytics serves a very unique niche. Waste in healthcare accounts for a significant cross section of healthcare costs. When you factor in fraud and abuse, it is significant to the bottom line. Unless you have a proprietary system with methodologies in place to analyze claims from a clinical standpoint and using analytical data, that waste is dollars out of our employees' wallets and our corporate coffers."

Mike Adams, Vice President, Benefits & HR Systems at Dean Foods Company

KEY CATEGORY OF FINDINGS

Superior analytics conducted by a highly motivated team of industry experts with 20+ years of experience analyzing medical claims.

We guarantee twice our fees in reduced and/or recovered wasteful spend. A \$129,300,000 annual medical spend can be reduced to \$123,000,000 or 4.9%.

Licensed board-certified physicians and other clinicians with insider experience add a second layer of clinical review.

We use advanced inferential analytics followed by expert clinical review to continuously monitor your medical claims.
